

1. Cosmic ray muon rate in Homestake DUSEL (Svoboda/Diwan)	1
2. Detector design considerations(Sullivan/Fleming)	3
2.1. Water Čerenkov Detector (Greg Sullivan)	3
2.2. Liquid argon TPC (Bonnie Fleming)	7
3. Depth requirements for physics (Bob McKeown)	11
3.1. Accelerator neutrinos (Milind/Gina)	11
3.2. Improved Search for Nucleon Decay (Edward Kearns/Fleming)	13
3.3. Observation of solar neutrinos (Josh Klein)	14
3.3.1. Day-Night Measurement	14
3.3.2. Other Solar Measurements	16
3.4. Observation of supernova burst neutrinos (Scholberg/Cline)	17
3.4.1. The Supernova Neutrino Signal	18
3.4.2. Depth Considerations	18
3.4.3. Recommendation	21
3.5. Observation of supernova relic neutrinos (Michael Smy/Vagins)	22
3.6. Observation of atmospheric neutrinos (Chris Walter)	23
3.6.1. Water Cherenkov	25
3.6.2. Liquid Argon	26
4. Existing infrastructure in Homestake and Siting Considerations (Svoboda)	26
4.1. Summary of criteria for siting and candidate levels (from Lesko)	26
4.2. Level Selection	26
4.3. Candidate Levels	27
5. Geotechnical considerations regarding deep placement of large caverns (Svoboda)	31
5.1. Review of the Preliminary Geo-technical Work (Lande/Diwan)	31
5.1.1. Determination of Excavation Stability	33
5.1.2. Rock Removal	35
